

Quiz 16.3 – Gibbs Energy and Equilibrium

Name: _____

Question 1

Consider the reaction at 25.0 °C: $\text{N}_2(\text{g}) + \text{O}_2(\text{g}) \rightleftharpoons 2\text{NO}(\text{g}) \quad \Delta G^\circ = 175.2 \frac{\text{kJ}}{\text{mol}}$

- Find ΔG if $P_{\text{N}_2} = 0.250 \text{ atm}$, $P_{\text{O}_2} = 0.100 \text{ atm}$, and $P_{\text{NO}} = 3.50 \text{ atm}$

- Find the equilibrium constant for this reaction

Question 2

Consider the reaction at 25.0 °C: $2\text{NO}(\text{g}) + \text{O}_2(\text{g}) \rightleftharpoons 2\text{NO}_2(\text{g}) \quad K = 6.4 \times 10^9$

- Find ΔG° for this reaction

- Find the value of Q for this reaction which gives $\Delta G = 3.14 \frac{\text{kJ}}{\text{mol}}$

On Shakespeare. 1630

By John Milton

What needs my Shakespeare for his honoured bones,
The labor of an age in piled stones,
Or that his hallowed relics should be hid
Under a star-pointing pyramid?
Dear son of Memory, great heir of fame,
What need'st thou such weak witness of thy name?
Thou in our wonder and astonishment
Hast built thyself a live-long monument.
For whilst to th' shame of slow-endeavouring art,
Thy easy numbers flow, and that each heart
Hath from the leaves of thy unvalued book
Those Delphic lines with deep impression took,
Then thou, our fancy of itself bereaving,
Dost make us marble with too much conceiving;
And so sepulchred in such pomp dost lie,
That kings for such a tomb would wish to die.

Odes III: XXX (23 BCE)

Horace

exegi monumentum aere perennius
regalique situ pyramidum altius,
quod non imber edax, non Aquilo inpotens
possit diruere ...
Non omnis moriar.

I have built a monument more lasting than bronze,
higher than the Pyramids' regal structures,
that no consuming rain, nor wild north wind
can destroy ...
I shall not wholly die.
