|-----------|-----------------------------------|
| Name: Ken |                                   |
| 0         |                                   |

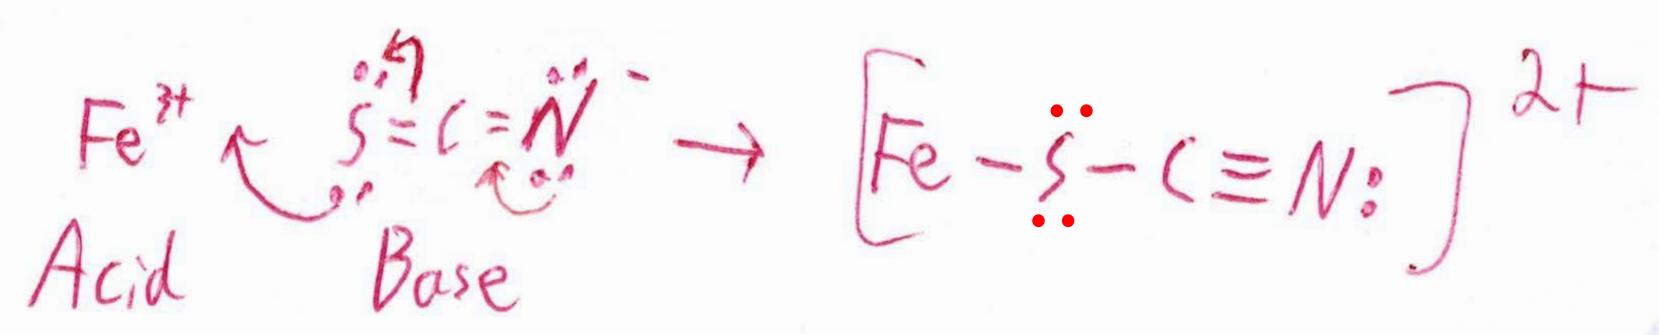

Question 1

SCN<sup>-</sup> ions can accept a hydrogen and act as a Brønsted-Lowry base, but it can also act as a Lewis base. Draw a Lewis structure for SCN<sup>-</sup> and indicate where the ion might make a new coordinate bond to form a Lewis adduct

Here 
$$5 = C = N$$
 for here

Question 2

Iron(III) ion will form a Lewis adduct with a single SCN<sup>-</sup> ion. Identify which reaction partner is the Lewis acid, and which is the Lewis base

Question 3

Give the molecular formula for the Lewis adduct described in Question 2 above

Question 4

Draw a Lewis structure for the Lewis adduct described in Questions 2 and 3 above. Indicate the coordinate covalent bond which forms the adduct

Question 5

Which of the following is incapable of acting as a Lewis base:

CH<sub>2</sub>O CH<sub>4</sub> N<sub>2</sub>O CN<sup>-</sup> CO<sub>2</sub>

$$C = 0$$

In the reaction  $CO_2(aq) + H_2O(l) \longrightarrow H_2CO_3(aq)$ , identify which reactant is the Lewis acid, and which is the Lewis base

$$O = C = 0 + 10 - H$$
Acid

Base
